Manoranjan Pal
Indian Statistical Institute
Visiting Professor, Techno-India University
Kolkata, India

Contents

Preface to the Sixth Edition

Introduction

- I.1 What is Econometrics? 1
- I.2 Why a Separate Discipline? 2
- I.3 Methodology of Econometrics 2
 - 1. Statement of Theory or Hypothesis 3
 - 2. Specification of the Mathematical Model of Consumption 3
 - 3. Specification of the Econometric Model of Consumption 3
 - 4. Obtaining Data 4
 - 5. Estimation of the Econometric Model 6
 - 6. Hypothesis Testing 6
 - 7. Forecasting or Prediction 7
 - 8. Use of the Model for Control or Policy Purposes 8
 - 9. Choosing among Competing Models 8
- I.4 Types of Econometrics 9
- I.5 Mathematical and Statistical Prerequisites 10
- I.6 The Role of the Computer 10
- I.7 Suggestions for Further Reading 10

PART 1

Single-Equation Regression Models

The Nature of Regression Analysis

- 1.1 Historical Origin of the Term Regression 15
- 1.2 The Modern Interpretation of Regression 15
 - Examples 16
- 1.3 Statistical versus Deterministic Relationships 19
- 1.4 Regression versus Causation 19

- 1.5 Regression versus Correlation 20
- 1.6 Terminology and Notation 20
- 1.7 The Nature and Sources of Data for Economic Analysis 21
 - Types of Data 21
 - The Sources of Data 26
 - The Accuracy of Data 26
 - A Note on the Measurement Scales of Variables 27

Summary and Conclusions 28

Exercises 28

2. Two-Variable Regression Analysis: Some Basic Ideas

- 2.1 A Hypothetical Example 34
- 2.2 The Concept of Population Regression Function (PRF) 37
- 2.3 The Meaning of the Term *Linear* 38
 - Linearity in the Variables 38
 - Linearity in the Parameters 38
- 2.4 Stochastic Specification of PRF 39
- 2.5 The Significance of the Stochastic Disturbance Term 41
- 2.6 The Sample Regression Function (SRF) 42
- 2.7 Illustrative Examples 45

Summary and Conclusions 46

Exercises 47

Questions 47

Empirical Exercises 50

3. Two-Variable Regression Model: The Problem of Estimation

- 3.1 The Method of Ordinary Least Squares 54
- 3.2 The Classical Linear Regression Model: The Assumptions Underlying the Method of Least Squares 60
 - A Word about These Assumptions 67
- 3.3 Precision or Standard Errors of Least-Squares Estimates 67
- 3.4 Properties of Least-Squares Estimators: The Gauss-Markov Theorem 69
- 3.5 The Coefficient of Determination r^2 : A Measure of "Goodness of Fit" 71
- 3.6 A Numerical Example 76
- 3.7 Illustrative Examples 79
- 3.8 A Note on Monte Carlo Experiments 81

Summary and Conclusions 82

Exercises 83

Questions 83

Empirical Exercises 85

Appendix 3A 89

- 3A.1 Derivation of Least-Squares Estimates 89
- 3A.2 Linearity and Unbiasedness Properties of Least-Squares Estimators 90
- 3A.3 Variances and Standard Errors of Least-Squares Estimators 91
- 3A.4 Covariance between $\hat{\beta}_1$ and $\hat{\beta}_2$ 91
- 3A.5 The Least-Squares Estimator of σ^2 91
- 3A.6 Minimum-Variance Property of Least-Squares Estimators 92
- 3A.7 Consistency of Least-Squares Estimators 94

4	Classical Normal Linear Regression Model (CNLRM)	95
4.1	The Probability Distribution of Disturbances u_i	95
4.2	The Normality Assumption for u_i	96
	Why the Normality Assumption?	96
4.3	Properties of OLS Estimators under the Normality Assumption	97
4.4	The Method of Maximum Likelihood (ML)	99
	Summary and Conclusions	100
	Appendix 4A	100
4A.1	Maximum Likelihood Estimation of Two-Variable Regression Model	100
4A.2	Maximum Likelihood Estimation of Food Expenditure in India	103
	Appendix 4A Exercises	103
5	Two-Variable Regression: Interval Estimation and Hypothesis Testing	105
5.1	Statistical Prerequisites	105
5.2	Interval Estimation: Some Basic Ideas	105
5.3	Confidence Intervals for Regression Coefficients β_1 and β_2	107
	Confidence Interval for β_2	107
	Confidence Interval for β_1 and β_2 Simultaneously	109
5.4	Confidence Interval for σ^2	109
5.5	Hypothesis Testing: General Comments	111
5.6	Hypothesis Testing: The Confidence-Interval Approach	111
	Two-Sided or Two-Tail Test	111
	One-Sided or One-Tail Test	113
5.7	Hypothesis Testing: The Test-of-Significance Approach	113
	Testing the Significance of Regression Coefficients: The t Test	113
	Testing the Significance of σ^2 : The χ^2 Test	116
5.8	Hypothesis Testing: Some Practical Aspects	117
	The Meaning of "Accepting" or "Rejecting" a Hypothesis	117
	The "Zero" Null Hypothesis and the "2-r" Rule of Thumb	118
	Forming the Null and Alternative Hypotheses	118
	Choosing α , the Level of Significance	119
	The Exact Level of Significance: The p Value	120
	Statistical Significance versus Practical Significance	120
	The Choice between Confidence-Interval and Test-of-Significance Approaches to Hypothesis Testing	121
5.9	Regression Analysis and Analysis of Variance	122
5.10	Application of Regression Analysis: The Problem of Prediction	124
	Mean Prediction	124
	Individual Prediction	126
5.11	Reporting the Results of Regression Analysis	126
5.12	Evaluating the Results of Regression Analysis	127
	Normality Tests	127
	Other Tests of Model Adequacy	129
	Summary and Conclusions	131
	Exercises	131
	Questions	131
	Empirical Exercises	133

Appendix 5A 140

- 5A.1 Probability Distributions Related to the Normal Distribution 140
- 5A.2 Derivation of Equation (5.3.2) 142
- 5A.3 Derivation of Equation (5.9.1) 142
- 5A.4 Derivations of Equations (5.10.2) and (5.10.6) 142
 - Variance of Mean Prediction 143
 - Variance of Individual Prediction 143

6. Extensions of the Two-Variable Linear Regression Model

- 6.1 Regression through the Origin 144
 - r^2 for Regression-through-Origin Model 147
 - 6.2 Scaling and Units of Measurement 151
 - A Word about Interpretation 153
 - 6.3 Regression on Standardized Variables 154
 - 6.4 Functional Forms of Regression Models 156
 - 6.5 How to Measure Elasticity: The Log-Linear Model 156
 - 6.6 Semilog Models: Log-Lin and Lin-Log Models 159
 - How to Measure the Growth Rate: The Log-Lin Model 159
 - The Lin-Log Model 161
 - 6.7 Reciprocal Models 163
 - Log Hyperbola or Logarithmic Reciprocal Model 168
 - 6.8 Choice of Functional Form 168
 - 6.9 A Note on the Nature of the Stochastic Error Term: Additive versus Multiplicative Stochastic Error Term 170
- Summary and Conclusions 171*
- Exercises 172*
- Questions 172
 - Empirical Exercises 174

Appendix 6A 178

- 6A.1 Derivation of Least-Squares Estimators for Regression through the Origin 178
- 6A.2 Proof that a Standardized Variable Has Zero Mean and Unit Variance 180
- 6A.3 Logarithms 180
- 6A.4 Growth Rate Formulas 182
- 6A.5 Box-Cox Regression Model 183

7. Multiple Regression Analysis: The Problem of Estimation

- 7.1 The Three-Variable Model: Notation and Assumptions 185
- 7.2 Interpretation of Multiple Regression Equation 188
- 7.3 The Meaning of Partial Regression Coefficients 188
- 7.4 OLS and ML Estimation of the Partial Regression Coefficients 189
 - OLS Estimators 189
 - Variances and Standard Errors of OLS Estimators 190
 - Properties of OLS Estimators 191
 - Maximum Likelihood Estimators 192
- 7.5 The Multiple Coefficient of Determination R^2 and the Multiple Coefficient of Correlation R 192

7.6	An Illustrative Example	194
	Regression on Standardized Variables	195
	Impact on the Dependent Variable of a Unit Change in More than One Regressor	195
7.7	Simple Regression in the Context of Multiple Regression: Introduction to Specification Bias	196
7.8	R^2 and the Adjusted R^2	197
	Comparing Two R^2 Values	198
	Allocating R^2 among Regressors	201
	The "Game" of Maximizing $\bar{R}$	201
7.9	The Cobb–Douglas Production Function: More on Functional Form	202
7.10	Polynomial Regression Models	205
7.11	Partial Correlation Coefficients	208
	Explanation of Simple and Partial Correlation Coefficients	208
	Interpretation of Simple and Partial Correlation Coefficients	209
	Summary and Conclusions	210
	Exercises	210
	Questions	210
	Empirical Exercises	213
	Appendix 7A	222
7A.1	Derivation of OLS Estimators Given in Equations (7.4.3) to (7.4.5)	222
7A.2	Equality between the Coefficients of PGNP in Equations (7.3.5) and (7.6.2)	224
7A.3	Derivation of Equation (7.4.19)	224
7A.4	Maximum Likelihood Estimation of the Multiple Regression Model	225
7A.5	EViews Output of the Cobb–Douglas Production Function in Equation (7.9.4)	226
8.	Multiple Regression Analysis: The Problem of Inference	228
8.1	The Normality Assumption Once Again	228
8.2	Hypothesis Testing in Multiple Regression: General Comments	229
8.3	Hypothesis Testing about Individual Regression Coefficients	230
8.4	Testing the Overall Significance of the Sample Regression	232
	The Analysis of Variance Approach to Testing the Overall Significance of an Observed Multiple Regression: The F Test	233
	Testing the Overall Significance of a Multiple Regression: The F Test	235
	An Important Relationship between R^2 and F	236
	Testing the Overall Significance of a Multiple Regression in Terms of R^2	237
	The "Incremental" or "Marginal" Contribution of an Explanatory Variable	238
8.5	Testing the Equality of Two Regression Coefficients	241
8.6	Restricted Least Squares: Testing Linear Equality Restrictions	243
	The t -Test Approach	244
	The F -Test Approach: Restricted Least Squares	244
	General F Testing	247
8.7	Testing for Structural or Parameter Stability of Regression Models: The Chow Test	249
8.8	Prediction with Multiple Regression	254
8.9	The Troika of Hypothesis Tests: The Likelihood Ratio (LR), Wald (W), and Lagrange Multiplier (LM) Tests	254
8.10	Testing the Functional Form of Regression: Choosing between Linear and Log–Linear Regression Models	255

<i>Summary and Conclusions</i>	256
<i>Exercises</i>	257
<i>Questions</i>	257
<i>Empirical Exercises</i>	259
<i>Appendix 8A</i>	269
8A.1 Likelihood Ratio (LR) Test	269
9. Dummy Variable Regression Models	
9.1 The Nature of Dummy Variables	271
9.2 ANOVA Models	272
Caution in the Use of Dummy Variables	275
9.3 ANOVA Models with Two Qualitative Variables	277
9.4 Regression with a Mixture of Quantitative and Qualitative Regressors: The ANCOVA Models	277
9.5 The Dummy Variable Alternative to the Chow Test	279
9.6 Interaction Effects Using Dummy Variables	282
9.7 The Use of Dummy Variables in Seasonal Analysis	284
9.8 Piecewise Linear Regression	288
9.9 Use of Dummy Variables to Detect Outlying Observations	291
9.10 Use of Dummy Variables for Prediction	292
9.11 Panel Data Regression Models	294
9.12 Some Technical Aspects of the Dummy Variable Technique	294
The Interpretation of Dummy Variables in Semilogarithmic Regressions	294
Dummy Variables and Heteroscedasticity	295
Dummy Variables and Autocorrelation	295
What Happens if the Dependent Variable is a Dummy Variable?	295
9.13 Topics for Further Study	296
9.14 A Concluding Example	296
<i>Summary and Conclusions</i>	300
<i>Exercises</i>	301
<i>Questions</i>	301
<i>Empirical Exercises</i>	307
<i>Appendix 9A</i>	310
9A.1 Semilogarithmic Regression with Dummy Regressor	310

PART 2

Relaxing the Assumptions of the Classical Model

10. Multicollinearity: What Happens if the Regressors are Correlated?	
10.1 The Nature of Multicollinearity	316
10.2 Estimation in the Presence of Perfect Multicollinearity	318
10.3 Estimation in the Presence of "High" but "Imperfect" Multicollinearity	320
10.4 Multicollinearity: Much Ado about Nothing? Theoretical Consequences of Multicollinearity	320
10.5 Practical Consequences of Multicollinearity	322
Large Variances and Covariances of OLS Estimators	322
Wider Confidence Intervals	324
"Insignificant" t Ratios	325
A High R^2 but Few Significant t Ratios	325

	Sensitivity of OLS Estimators and Their Standard Errors to Small Changes in Data	326	
	Consequences of Micronumerosity	327	
10.6	An Illustrative Example	327	
10.7	Detection of Multicollinearity	331	
10.8	Remedial Measures	336	
	Do Nothing	336	
	Rule-of-Thumb Procedures	336	
10.9	Is Multicollinearity Necessarily Bad? Maybe Not, If the Objective Is Prediction Only	341	
10.10	An Extended Example: The Longley Data	341	
	Summary and Conclusions	344	
	Exercises	345	
	Questions	345	
	Empirical Exercises	351	
11.	Heteroscedasticity: What Happens if the Error Variance is Nonconstant?		359
11.1	The Nature of Heteroscedasticity	359	
11.2	OLS Estimation in the Presence of Heteroscedasticity	364	
11.3	The Method of Generalized Least Squares (GLS)	365	
	Difference between OLS and GLS	367	
11.4	Consequences of Using OLS in the Presence of Heteroscedasticity	368	
	OLS Estimation Allowing for Heteroscedasticity	368	
	OLS Estimation Disregarding Heteroscedasticity	368	
	A Technical Note	370	
11.5	Detection of Heteroscedasticity	370	
	Informal Methods	370	
	Formal Methods	372	
11.6	Remedial Measures	383	
	When σ_i^2 is Known: The Method of Weighted Least Squares	383	
	When σ_i^2 is not Known	384	
11.7	Concluding Examples	390	
11.8	A Caution about Overreacting to Heteroscedasticity	394	
	Summary and Conclusions	395	
	Exercises	395	
	Questions	395	
	Empirical Exercises	398	
	Appendix 11A	403	
11A.1	Proof of Equation (11.2.2)	403	
11A.2	The Method of Weighted Least Squares	404	
11A.3	Proof that $E(\hat{\sigma}^2) \neq \sigma^2$ in the Presence of Heteroscedasticity	405	
11A.4	White's Robust Standard Errors	405	
12.	Autocorrelation: What Happens if the Error Terms are Correlated?		40
12.1	The Nature of the Problem	408	
12.2	OLS Estimation in the Presence of Autocorrelation	414	
12.3	The BLUE Estimator in the Presence of Autocorrelation	416	
12.4	Consequences of Using OLS in the Presence of Autocorrelation	417	
	OLS Estimation Allowing for Autocorrelation	417	
	OLS Estimation Disregarding Autocorrelation	418	

12.5	Relationship between Wages and Productivity in the Business Sector of the United States, 1960–2005	422
12.6	Detecting Autocorrelation	424
	I. Graphical Method	424
	II. The Runs Test	426
	III. Durbin–Watson d Test	428
	IV. A General Test of Autocorrelation: The Breusch–Godfrey (BG) Test	432
	Why so Many Tests of Autocorrelation?	434
12.7	What to do when you find Autocorrelation: Remedial Measures	434
12.8	Model Mis-Specification versus Pure Autocorrelation	434
12.9	Correcting for (Pure) Autocorrelation: The Method of Generalized Least Squares (GLS)	435 •
	When ρ is Known	436
	When ρ is not Known	436
12.10	The Newey–West Method of Correcting the OLS Standard Errors	441
12.11	OLS versus FGLS and HAC	441
12.12	Additional Aspects of Autocorrelation	442
	Dummy Variables and Autocorrelation	442
	ARCH and GARCH Models	442
	Coexistence of Autocorrelation and Heteroscedasticity	443
12.13	A Concluding Example	443
	Summary and Conclusions	445
	Exercises	446
	Questions	446
	Empirical Exercises	453
	Appendix 12A	459
12A.1	Proof that the Error Term v_t in Equation (12.1.11) is Autocorrelated	459
12A.2	Proof of Equations (12.2.3), (12.2.4), and (12.2.5)	459
13.	Econometric Modeling: Model Specification and Diagnostic Testing	
13.1	Model Selection Criteria	461
13.2	Types of Specification Errors	461
13.3	Consequences of Model Specification Errors	463
	Underfitting a Model (Omitting a Relevant Variable)	463
	Inclusion of an Irrelevant Variable (Overfitting a Model)	466
13.4	Tests of Specification Errors	467
	Detecting the Presence of Unnecessary Variables (Overfitting a Model)	467
	Tests for Omitted Variables and Incorrect Functional Form	469
13.5	Errors of Measurement	474
	Errors of Measurement in the Dependent Variable Y	474
	Errors of Measurement in the Explanatory Variable X	475
13.6	Incorrect Specification of the Stochastic Error Term	479
13.7	Nested versus Non-Nested Models	479
13.8	Tests of Non-Nested Hypotheses	480
	The Discrimination Approach	480
	The Discerning Approach	481
13.9	Model Selection Criteria	485
	The R^2 Criterion	486

Adjusted R^2	486
Akaike's Information Criterion (AIC)	486
Schwarz's Information Criterion (SIC)	487
Mallows's C_p Criterion	487
A Word of Caution about Model Selection Criteria	488
Forecast Chi-Square (χ^2)	488
13.10 Additional Topics in Econometric Modeling	489
Outliers, Leverage, and Influence	489
Recursive Least Squares	490
Chow's Prediction Failure Test	491
Missing Data	492
13.11 Concluding Examples	493
1. A Model of Hourly Wage Determination	493
2. Real Consumption Function for the United States, 1947–2000	498
13.12 Non-Normal Errors and Stochastic Regressors	502
1. What Happens if the Error Term is Not Normally Distributed?	502
2. Stochastic Explanatory Variables	503
13.13 A Word to the Practitioner	504
Summary and Conclusions	505
Exercises	506
Questions	506
Empirical Exercises	510
Appendix 13A	512
13A.1 The Proof that $E(b_{12}) = \beta_2 + \beta_3 b_{32}$ [Equation (13.3.3)]	512
13A.2 The Consequences of Including an Irrelevant Variable: The Unbiasedness Property	512
13A.3 The Proof of Equation (13.5.10)	513
13A.4 The Proof of Equation (13.6.2)	514

PART 3

Topics in Econometrics

4. Nonlinear Regression Models	
14.1 Intrinsically Linear and Intrinsically Nonlinear Regression Models	519
14.2 Estimation of Linear and Nonlinear Regression Models	521
14.3 Estimating Nonlinear Regression Models: The Trial-and-Error Method	521
14.4 Approaches to Estimating Nonlinear Regression Models	523
Direct Search or Trial-and-Error or Derivative-Free Method	523
Direct Optimization	523
Iterative Linearization Method	523
14.5 Illustrative Examples	524
14.6 Levenberg–Marquardt's Method	528
Summary and Conclusions	531
Exercises	532
Questions	532
Empirical Exercises	533
Appendix 14A	534
14A.1 Derivation of Equations (14.2.4) and (14.2.5)	534

14A.2	The Linearization Method	534
14A.3	Linear Approximation of the Exponential Function Given in Equation (14.2.2)	535
15.	Qualitative Response Regression Models	537
15.1	The Nature of Qualitative Response Models	537
15.2	The Linear Probability Model (LPM)	539
	Non-Normality of the Disturbances u_i	539
	Heteroscedastic Variances of the Disturbances	540
	Questionable Value of R^2 as a Measure of Goodness of Fit	541
15.3	Applications of LPM	545
15.4	Alternatives to LPM	548
15.5	The Logit Model	549
15.6	Estimation of the Logit Model	551
	Data at the Individual Level	551
	Grouped or Replicated Data	552
15.7	The Grouped Logit (Glogit) Model: A Numerical Example	554
	Interpretation of the Estimated Logit Model	554
15.8	The Logit Model for Ungrouped or Individual Data	557
15.9	The Probit Model	561
	Probit Estimation with Grouped Data: Gprobit	563
	The Probit Model for Ungrouped or Individual Data	565
	The Marginal Effect of a Unit Change in the Value of a Regressor in the Various Regression Models	566
15.10	Logit and Probit Models	566
15.11	The Tobit Model	569
	Illustration of the Tobit Model: Ray Fair's Model of Extramarital Affairs	570
15.12	Modeling Count Data: The Poisson Regression Model	571
15.13	Further Topics in Qualitative Response Regression Models	574
	Ordinal Logit and Probit Models	575
	Multinomial Logit and Probit Models	575
	Duration Models	575
	Summary and Conclusions	576
	Exercises	577
	Questions	577
	Empirical Exercises	578
Appendix 15A		584
15A.1	Maximum Likelihood Estimation of the Logit and Probit Models for Individual (Ungrouped) Data	584
16.	Panel Data Regression Models	586
16.1	Why Panel Data?	587
16.2	Panel Data: An Illustrative Example	588
16.3	Pooled OLS Regression or Constant Coefficients Model	591
16.4	The Fixed Effect Least-Squares Dummy Variable (LSDV) Model	593
	A Caution in the Use of the Fixed Effect LSDV Model	595
16.5	The Fixed-Effect Within-Group (WG) Estimator	596
16.6	The Random Effects Model (REM)	599
	Breusch and Pagan Lagrange Multiplier Test	602

16.7	Properties of Various Estimators	603	
16.8	Fixed Effects versus Random Effects Model: Some Guidelines	603	
16.9	Panel Data Regressions: Some Concluding Comments	604	
16.10	Some Illustrative Examples	605	
	<i>Summary and Conclusions</i>	610	
	<i>Exercises</i>	611	
	Questions	611	
	Empirical Exercises	612	
17.	Dynamic Econometric Models: Autoregressive and Distributed-Lag Models		615
17.1	The Role of "Time," or "Lag," in Economics	616	
17.2	The Reasons for Lags	620	
17.3	Estimation of Distributed-Lag Models	621	
	Ad Hoc Estimation of Distributed-Lag Models	621	
17.4	The Koyck Approach to Distributed-Lag Models	622	
	The Median Lag	624	
	The Mean Lag	625	
17.5	Rationalization of the Koyck Model: The Adaptive Expectations Model	627	
17.6	Another Rationalization of the Koyck Model: The Stock Adjustment, or Partial Adjustment, Model	629	
17.7	Combination of Adaptive Expectations and Partial Adjustment Models	631	
17.8	Estimation of Autoregressive Models	632	
17.9	The Method of Instrumental Variables (IV)	633	
17.10	Detecting Autocorrelation in Autoregressive Models: Durbin h Test	634	
17.11	A Numerical Example: The Demand for Money in Canada, 1979-I to 1988-IV	636	
17.12	Illustrative Examples	639	
17.13	The Almon Approach to Distributed-Lag Models: The Almon or Polynomial Distributed Lag (PDL)	642	
17.14	Causality in Economics: The Granger Causality Test	649	
	The Granger Test	650	
	A Note on Causality and Exogeneity	654	
	<i>Summary and Conclusions</i>	655	
	<i>Exercises</i>	656	
	Questions	656	
	Empirical Exercises	661	
	Appendix 17A	665	
17A.1	The Sargan Test for the Validity of Instruments	665	

PART 4

Simultaneous-Equation Models and Time Series Econometrics

18.	Simultaneous-Equation Models		669
18.1	The Nature of Simultaneous-Equation Models	669	
18.2	Examples of Simultaneous-Equation Models	670	
18.3	The Simultaneous-Equation Bias: Inconsistency of OLS Estimators	675	
18.4	The Simultaneous-Equation Bias: A Numerical Example	678	
	<i>Summary and Conclusions</i>	680	
	<i>Exercises</i>	680	

Questions	680
Empirical Exercises	683

19. The Identification Problem

19.1	Notations and Definitions	685
19.2	The Identification Problem	688
	Underidentification	688
	Just, or Exact, Identification	690
	Overidentification	693
19.3	Rules for Identification	695
	The Order Condition of Identifiability	695
	The Rank Condition of Identifiability	697
19.4	A Test of Simultaneity	699
	Hausman Specification Test	700
19.5	Tests for Exogeneity	702
19.6	Normalization	702
19.7	Identification under Homogeneous Linear Restrictions	702
19.8	Identification under Non-homogeneous Linear Restrictions	704
	Summary and Conclusions	705
	Exercises	706
	Questions	706
	Empirical Exercises	708

20. Simultaneous-Equation Methods

20.1	Approaches to Estimation	711
20.2	Recursive Models and Ordinary Least Squares	713
20.3	Estimation of a Just Identified Equation: The Method of Indirect Least Squares (ILS)	715
	An Illustrative Example	715
	Properties of ILS Estimators	718
20.4	Estimation of an Overidentified Equation: The Method of Two-Stage Least Squares (2SLS)	718
20.5	2SLS: A Numerical Example	721
20.6	Illustrative Examples	724
20.7	Limited Information Maximum Likelihood Method	730
	Summary and Conclusions	731
	Exercises	732
	Questions	732
	Empirical Exercises	734

Appendix 20A

20A.1	Bias in the Indirect Least-Squares Estimators	736
20A.2	Estimation of Standard Errors of 2SLS Estimators	737

21. Time Series Econometrics: Some Basic Concepts

21.1	A Look at Selected U.S. Economic Time Series	740
21.2	Key Concepts	741
21.3	Stochastic Processes	742
	Stationary Stochastic Processes	742
	Nonstationary Stochastic Processes	744
21.4	Unit Root Stochastic Process	746

21.5	Trend Stationary (TS) and Difference Stationary (DS) Stochastic Processes	747
21.6	Integrated Stochastic Processes	749
	Properties of Integrated Series	750
21.7	The Phenomenon of Spurious Regression	750
21.8	Tests of Stationarity	752
	1. Graphical Analysis	752
	2. Autocorrelation Function (ACF) and Correlogram	752
	Statistical Significance of Autocorrelation Coefficients	756
21.9	The Unit Root Test	757
	The Augmented Dickey-Fuller (ADF) Test	760
	Testing the Significance of More than One Coefficient: The F Test	761
	The Phillips-Perron (PP) Unit Root Tests	761
	Testing for Structural Changes	761
	A Critique of the Unit Root Tests	762
21.10	Transforming Nonstationary Time Series	763
	Difference-Stationary Processes	763
	Trend-Stationary Processes	763
21.11	Cointegration: Regression of a Unit Root Time Series on Another Unit Root Time Series	765
	Testing for Cointegration	766
	Cointegration and Error Correction Mechanism (ECM)	767
21.12	Some Economic Applications	768
	Summary and Conclusions	771
	Exercises	772
	Questions	772
	Empirical Exercises	773
22.	Time Series Econometrics: Forecasting	
22.1	Approaches to Economic Forecasting	776
	Exponential Smoothing Methods	777
	Single-Equation Regression Models	777
	Simultaneous-Equation Regression Models	777
	ARIMA Models	777
	VAR Models	778
22.2	AR, MA, and ARIMA Modeling of Time Series Data	778
	An Autoregressive (AR) Process	778
	A Moving Average (MA) Process	779
	An Autoregressive and Moving Average (ARMA) Process	779
	An Autoregressive Integrated Moving Average (ARIMA) Process	780
22.3	The Box-Jenkins (BJ) Methodology	780
22.4	Identification	781
	ACF and PACF for Some Useful Models	785
22.5	Estimation of the ARIMA Model	787
22.6	Diagnostic Checking	787
22.7	Forecasting	787
22.8	Further Aspects of the BJ Methodology	789
22.9	Vector Autoregression (VAR)	790
	Estimation of VAR	790

Forecasting with VAR	793
VAR and Causality	793
Some Problems with VAR Modeling	793
An Application of VAR: A VAR Model of the Texas Economy	794
The ARCH and GARCH Models	795
22.10 Measuring Volatility in Financial Time Series	800
What to Do If ARCH is Present	801
A Word on the Durbin-Watson d and the ARCH Effect	801
A Note on the GARCH Model	801
22.11- Concluding Examples	801
Summary and Conclusions	806
Exercises	807
Questions	807
Empirical Exercises	807

Appendix A: A Review of Some Statistical Concepts

A.1	Summation and Product Operators	809
A.2	Sample Space, Sample Points, and Events	810
A.3	Probability and Random Variables	810
	Probability	810
	Random Variables	811
A.4	Probability Density Function (PDF)	811
	Probability Density Function of a Discrete Random Variable	811
	Probability Density Function of a Continuous Random Variable	812
	Joint Probability Density Functions	813
	Marginal Probability Density Function	814
A.5	Characteristics of Probability Distributions	817
	Expected Value	817
	Variance	819
	Properties of Variance	820
	Covariance	820
	Properties of Covariance	821
	Correlation Coefficient	821
	Conditional Expectation and Conditional Variance	822
	Properties of Conditional Expectation and Conditional Variance	823
	Higher Moments of Probability Distributions	824
A.6	Some Important Theoretical Probability Distributions	825
	Normal Distribution	825
	The χ^2 (Chi-Square) Distribution	828
	Student's t Distribution	829
	The F Distribution	830
	The Bernoulli Binomial Distribution	831
	Binomial Distribution	831
	The Poisson Distribution	832
A.7	Statistical Inference: Estimation	832
	Point Estimation	832
	Interval Estimation	833
	Methods of Estimation	834

	Small-Sample Properties	835
	Large-Sample Properties	838
A.8	Statistical Inference: Hypothesis Testing	840
	The Confidence Interval Approach	847
	The Test of Significance Approach	845
	References	846

Appendix B: Rudiments of Matrix Algebra

B.1	Definitions	847
	Matrix	847
	Column Vector	848
	Row Vector	848
	Transposition	848
	Submatrix	848
B.2	Types of Matrices	849
	Square Matrix	849
	Diagonal Matrix	849
	Scalar Matrix	849
	Identity, or Unit, Matrix	849
	Symmetric Matrix	849
	Null Matrix	850
	Null Vector	850
	Equal Matrices	850
B.3	Matrix Operations	850
	Matrix Addition	850
	Matrix Subtraction	850
	Scalar Multiplication	851
	Matrix Multiplication	851
	Properties of Matrix Multiplication	852
	Matrix Transposition	853
	Matrix Inversion	853
B.4	Determinants	853
	Evaluation of a Determinant	854
	Properties of Determinants	855
	Rank of a Matrix	856
	Minor	856
	Cofactor	857
B.5	Finding the Inverse of a Square Matrix	857
B.6	Matrix Differentiation	858
	References	859

Appendix C: The Matrix Approach to Linear Regression Model

C.1	The k -Variable Linear Regression Model	860
C.2	Assumptions of the Classical Linear Regression Model in Matrix Notation	862
C.3	OLS Estimation	864
	An Illustration	866
	Variance-Covariance Matrix of $\hat{\beta}$	867
	Properties of OLS Vector $\hat{\beta}$	869

C.4	The Coefficient of Determination R^2 in Matrix Notation	869
C.5	The Correlation Matrix	870
C.6	Hypothesis Testing about Individual Regression Coefficients in Matrix Notation	870
C.7	Testing the Overall Significance of Regression: Analysis of Variance in Matrix Notation	871
C.8	Testing Linear Restrictions: General F Testing Using Matrix Notation	872
C.9	Prediction Using Multiple Regression: Matrix Formulation	872
	Mean Prediction	872
	Variance of Mean Prediction	873
	Individual Prediction	873
	Variance of Individual Prediction	873
C.10	Summary of the Matrix Approach: An Illustrative Example	874
C.11	Generalized Least Squares (GLS)	878
C.12	Summary and Conclusions	879
	Exercises	880
	Appendix CA	885
CA.1	Derivation of k Normal or Simultaneous Equations	885
CA.2	Matrix Derivation of Normal Equations	886
CA.3	Variance-Covariance Matrix of β	886
CA.4	BLUE Property of OLS Estimators	887

Appendix D: Statistical Tables

Appendix E: Computer Output of EViews, MINITAB, Excel, and STATA

E.1	EViews	905
E.2	MINITAB	907
E.3	Excel	908
E.4	STATA	909
E.5	Concluding Comments	910
	References	910
