

SECOND EDITION

BIOLOGICAL SCIENCE 1&2

N.P.O. Green
G. W. Stout
D. J. Taylor

Editor:
R. Soper

CAMBRIDGE

Contents

Preface	xi		
Acknowledgements	xiii		
Chapter One Introduction to the subject	1	Chapter Five Chemicals of life	125
Chapter Two Variety of life – prokaryotes, viruses and fungi	3	5.1 Introduction to biochemistry	125
2.1 Prokaryotes compared with eukaryotes	3	5.2 Carbohydrates (saccharides)	130
Kingdom Prokaryotae	4	5.3 Lipids	138
2.2 Bacteria	4	5.4 Amino acids	143
2.3 Viruses	4	5.5 Proteins	146
Kingdom Fungi	13	5.6 Nucleic acids	154
2.4 Fungi	17	5.7 Other biochemically important molecules	160
2.5 Benefits and uses of micro-organisms	17	5.8 Identification of biochemicals	160
2.6 Harmful organisms	24		
2.7 Practical work	30	Chapter Six Enzymes	167
	33	6.1 Catalysis and energy of activation	167
Chapter Three Variety of life – protoctists and plants	39	6.2 Enzyme cofactors	169
Kingdom Protoctista	40	6.3 The rate of enzyme reactions	172
3.1 Characteristics and classification of protoctists	40	6.4 Factors affecting the rate of enzyme reactions	172
3.2 Algae	40	6.5 Enzyme inhibition	176
3.3 Phylum Euglenoidea	49	6.6 Allosteric enzymes	178
3.4 Phylum Oomycota	49	6.7 Control of metabolism	179
3.5 Phyla Rhizopoda, Zoomastigina, Apicomplexa, Ciliophora	51	6.8 Enzyme classification	180
Kingdom Plantae	59	6.9 Enzyme technology	180
3.6 Phylum Bryophyta	59		
3.7 Phyla Lycopodophyta (clubmosses), Sphenophyta (horsetails) and Filicinophyta (ferns)	64	Chapter Seven Cells	185
3.8 Seed-bearing plants	73	7.1 Typical animal and plant cells	192
3.9 Comparative survey of land plants	81	7.2 Structures common to animal and plant cells	192
		7.3 Structures characteristic of plant cells	211
Chapter Four Variety of life – animals	85	Chapter Eight Histology	215
4.1 Kingdom Animalia	85	8.1 Simple plant tissues – tissues consisting of one type of cell	215
4.2 Origins and trends	85	8.2 Plant tissues consisting of more than one type of cell	225
4.3 Phylum Cnidaria (Coelenterata)	88	8.3 Animal epithelial tissue	230
4.4 Phylum Platyhelminthes	92	8.4 Animal connective tissue	234
4.5 Body cavities	98	8.5 Muscle tissue	243
4.6 Phylum Nematoda	100	8.6 Nervous tissue	244
4.7 Phylum Annelida	100		
4.8 Phylum Mollusca	106	Chapter Nine Autotrophic nutrition	249
4.9 Phylum Arthropoda	106	9.1 Grouping of organisms according to their principal sources of energy and carbon	249
4.10 Phylum Echinodermata	119	9.2 Photosynthesis	250
4.11 Phylum Chordata	119	9.3 The structure of the leaf	251
		9.4 Biochemistry of photosynthesis	259
		9.5 Factors affecting photosynthesis	268
		9.6 Measuring rates of photosynthesis	272
		9.7 Compensation points	274

9.8	Photorespiration and C_4 photosynthesis	275
9.9	Photosynthetic bacteria	280
9.10	Chemosynthesis	281
9.11	Mineral cycles (biogeochemical cycles)	281
9.12	Mineral nutrition of plants and animals	284
Chapter Ten Heterotrophic nutrition		289
10.1	Modes of heterotrophic nutrition	289
10.2	Feeding mechanisms in a range of animals	292
10.3	Nutrition in mammals	300
10.4	The alimentary canal in humans	304
10.5	The control of digestive secretions	318
10.6	The fate of absorbed food materials	319
10.7	Regulation of food intake in humans	319
10.8	Variations in the mammalian alimentary canal	320
Chapter Eleven Energy utilisation		323
11.1	Role of respiration	324
11.2	ATP (adenosine triphosphate)	324
11.3	Biological oxidation	325
11.4	Shuttle systems	332
11.5	Mitochondria	334
11.6	Gaseous exchange	340
11.7	Gaseous exchange in a mammal	349
11.8	Unusual conditions in ventilation	356
11.9	Flowering plants	357
Chapter Twelve Organisms and their environment with Rosalind Taylor and Stephen Tomkins		359
12.1	Approaches to ecology	360
12.2	The ecosystem	363
12.3	Energy and nutrient relationships	364
12.4	Biogeochemical cycles – the cycling of matter	377
12.5	The abiotic component of ecosystems: the physical habitat factors	387
12.6	Community ecology and ecological succession	398
12.7	Population ecology	404
12.8	Agriculture and horticulture	419
12.9	The Green Revolution	425
12.10	Conservation	427
Chapter Thirteen Quantitative ecology		439
13.1	Methods of measuring environmental factors	439
13.2	Biotic analysis	444
13.3	Ecological research projects and investigations	452
13.4	A synecological investigation	453
13.5	An autecological investigation	456
Answers and discussion for chapters 2–13		461
Chapter 2		461
Chapter 3		462
Chapter 5		462
Chapter 6		280
Chapter 7		281
Chapter 9		281
Chapter 10		284
Chapter 11		289
Chapter 12		289
Chapter 13		292
Chapter Fourteen Transport		
Transport in plants		
14.1	Plant water relations	300
14.2	Movement of water through the flower	304
14.3	Transpiration and movement of water through the leaf	318
14.4	Ascent of water in the xylem	319
14.5	Uptake of water by roots	319
14.6	Uptake of mineral salts and their transport across roots	320
14.7	Translocation of mineral salts through plants	320
14.8	Translocation of organic solutes in phloem	320
Transport in animals		
14.9	General characteristics of a circulatory system	323
14.10	The development of transport systems in animals	324
14.11	Composition of mammalian blood	324
14.12	The mammalian circulatory system	325
14.13	Functions of mammalian blood	332
14.14	The immune system	334
Chapter Fifteen Coordination and control in plants		
15.1	Plant movements	340
15.2	Plant growth substances	349
15.3	Synergism and antagonism	356
15.4	Phytochrome and effects of light on plant development	357
15.5	Vernalisation and flowering	357
Chapter Sixteen Coordination and control in animals		
16.1	The nervous system	360
16.2	The vertebrate nervous system	363
16.3	The phylogenetic development of the nervous system	364
16.4	Sensory receptors	377
16.5	Structure and function of receptors	387
16.6	Effectors – the endocrine system	398
16.7	The study of behaviour (ethology)	404
16.8	Innate behaviour	419
16.9	Learned behaviour	425
Chapter Seventeen Movement and support		
17.1	Skeletal systems	427

17.2	Skeletal tissue	629	22.7	Genetic control	824
17.3	Anatomy of the skeleton of a mammal (the rabbit)	631	22.8	The genetic control of development	828
17.4	The muscle system	637	Chapter Twenty-three Variation and genetics	833	
17.5	Innervation of skeletal muscle	644	23.1	Mendel's work	833
17.6	Locomotion in selected non-vertebrates	648	23.2	The chromosomal basis of inheritance	838
17.7	Locomotion in vertebrates	655	23.3	Linkage	840
17.8	Support in plants	666	23.4	Gene mapping	843
Chapter Eighteen Homeostasis	667		23.5	Linkage groups and chromosomes	844
18.1	Control systems in biology	667	23.6	Sex discrimination	845
18.2	Temperature regulation	673	23.7	Gene interactions	848
18.3	Ectothermic animals	676	23.8	Variation	853
18.4	Endothermic animals	677	23.9	Mutation	854
18.5	The mammalian liver	686	Chapter Twenty-four Evolution – history of life	859	
Chapter Nineteen Excretion and osmoregulation	695		24.1	Theories of the origin of life	859
19.1	The significance of excretion and osmoregulation	695	24.2	The nature of the earliest organisms	863
19.2	Nitrogenous excretory products	697	24.3	Summary of the 'theories' of the origin of life	864
19.3	Nitrogenous excretion and osmoregulation	698	24.4	The theory of evolution	864
19.4	A phylogenetic review of organs and processes of nitrogenous excretion and osmoregulation	701	24.5	Natural selection	866
19.5	The mammalian kidney	712	24.6	Modern views on evolution	868
19.6	Anti-diuretic hormone (ADH) and the formation of a concentrated or dilute urine	721	24.7	Evidence for the theory of evolution	868
19.7	Control of blood sodium level	722	24.8	Human evolution by <i>Stephen Tomkins</i>	886
19.8	Control of blood pH	723	Chapter Twenty-five Mechanisms of speciation	891	
Chapter Twenty Reproduction	725		25.1	Population genetics	891
20.1	Asexual and sexual reproduction	725	25.2	Factors producing changes in populations	894
20.2	Sexual reproduction in plants	735	25.3	Selection	896
20.3	Human sexual reproduction	752	25.4	Artificial selection	899
20.4	Phylogenetic review of sexual reproduction in vertebrates	769	25.5	Natural selection	902
Chapter Twenty-one Growth and development	771		25.6	The concept of species	906
21.1	Measurement of growth	771	25.7	Speciation	906
21.2	Patterns of growth	774	25.8	Intraspecific speciation	906
21.3	Control of growth and development	776	25.9	Interspecific hybridisation	909
21.4	Development	776	Answers and discussion for chapters 14–25	911	
21.5	Morphogenesis	777	Chapter 14	911	
21.6	Growth and development in the flowering plant	778	Chapter 15	913	
21.7	Metamorphosis	788	Chapter 16	916	
21.8	Development in vertebrates	792	Chapter 17	916	
21.9	Repair and regeneration	794	Chapter 18	917	
21.10	Dormancy	794	Chapter 20	917	
Chapter Twenty-two Continuity of life	797		Chapter 21	918	
22.1	The cell cycle	797	Chapter 22	919	
22.2	Mitosis	798	Chapter 23	920	
22.3	Meiosis	802	Chapter 24	923	
22.4	The structure of chromosomes	811	Chapter 25	924	
22.5	The nature of genes	816	Appendix 1	Biological chemistry	925
22.6	Protein synthesis	821	Appendix 2	Biological techniques	936
			Appendix 3	Classification	950
			Appendix 4	Nomenclature and units	952
			Appendix 5	The geological time scale	954
			Index	957
