ESSENTIALS OF GENETICS

LEON
L. L. L.
MICHAEL R.
L. L. L.

BRIEF CONTENTS

- 1 An Introduction to Genetics 2
- 2 Cell Division and Chromosomes 18
- 3 Mendelian Genetics 42
- 4 Modification of Mendelian Ratios 68
- 5 Quantitative Genetics 90
- 6 Linkage and Chromosome Mapping 112
- 7 Non-Mendelian Inheritance 142
- 8 Chromosome Variation and Sex Determination 156
- 9 DNA—The Physical Basis of Life 188
- 10 ✓ DNA—Replication and Synthesis 212
- 11 DNA—Organization in Chromosomes and Genes 232
- 12 DNA—Mutation, Repair, and Transposable Elements 254
- 13 Storage and Expression of Genetic Information 282
- 14 Proteins: The End Product of Genes 314
- 15 Genetics of Bacteria and Bacteriophages 336
- 16 Recombinant DNA: Cloning and Applications 362
- 17 ✓ Regulation of Gene Expression 386
- 18 Developmental Genetics and Behavior 408
- 19 Genetics and Cancer 434
- 20 The Genetic Basis of Immunity 454
- 21 Population Genetics 474
- 22 Genetics and Evolution 492
