MICROBIOLOGY

*J. Nicklin, K. Graeme-Cook,
T. Paget & R. Killington*

	1
Section A – The microbial world	1
A1 The microbial world	5
Section B – Microbial metabolism	5
B1 Heterotrophic pathways	12
B2 Electron transport and oxidative phosphorylation	17
B3 Autotrophic metabolism	22
B4 Biosynthetic pathways	27
Section C – Information storage and transfer	27
✓C1 Structure and organization of DNA	31
C2 DNA replication	34
C3 RNA molecules in the cell	40
✓C4 Transcription	49
C5 Control of gene expression	51
C6 Structure of proteins	55
✓C7 Translation	61
Section D – Bacterial structure and function	61
D1 Bacterial taxonomy	71
D2 Bacterial cell structure	77
D3 Bacterial cell envelope	81
D4 Bacterial cell-wall synthesis	85
D5 Transport across the membrane	89
D6 Bacterial movement and chemotaxis	93
D7 Growth in the laboratory	97
D8 Bacterial growth and cell cycle	101
D9 Techniques used to study bacteria	105
Section E – Bacterial genetics	111
✓E1 Mutations	115
✓E2 Mutagenesis	119
✓E3 Recombination and transposition	123
E4 DNA repair mechanisms	127
E5 Plasmids	131
E6 F plasmids and conjugation	135
E7 Bacteriophage	139
E8 Replication of bacteriophage	143
E9 Transduction	147
E10 Transformation	151
Section F – Bacteria and their environment	155
F1 Bacteria in the environment	159
F2 Bacteria in industry	163
F3 Bacterial disease – an overview	167
