Contents

I		
The characteristics and variety of living things	I	
1.1 The characteristics of life		
1.2 Metabolism and enzymes		
1.3 Identifying organisms		
1.4 Classification: sorting living things into groups		
2		
Cells	13	
2.1 Cell structure		
2.2 Plant and animal cells compared		
2.3 Cells, tissues, and organs		
2.4 Cell size		
2.5 Cell division and growth		
2.6 Cell division by mitosis		
2.7 Osmosis and diffusion in cells		
3		
Food and diet	27	
3.1 Energy value of food		
3.2 Types of food and their composition		
3.3 Why we need water		
3.4 Dietary fibre (roughage)		
3.5 A balanced diet		
3.6 Diet problems		
3.7 Food additives		
3.8 Feeding the world's billions		
3.9 Biotechnology and food production		
4		
Feeding and the digestive system	40	
4.1 Digestion, absorption, and assimilation		
4.2 Digestive enzymes		
4.3 Teeth		
4.4 Digestion in the mouth		
4.5 Swallowing and peristalsis		
4.6 Digestion in the stomach		
4.7 Digestion and absorption in the small intestine		
4.8 Functions of the large intestine		
4.9 Summary of digestion and assimilation		

5	
Plant nutrition	51
5.1 The mechanism of photosynthesis	
5.2 Leaf structure in relation to photosynthesis	
5.3 The leaf in action	
5.4 The rate of photosynthesis	
5.5 The importance of photosynthesis	
5.6 A plant's mineral needs	
6	
Transport in mammals	62
6.1 The need for a transport system	
6.2 Composition of blood	
6.3 Circulation of blood in mammals	
6.4 Tissue fluid and the lymphatic system	
6.5 The main functions of blood	
6.6 Blood groups and blood clotting	
6.7 Diseases of the circulatory system	
7	
Support and transport in plants	79
7.1 Vascular tissue in flowering plants	
7.2 Support in plants	
7.3 Flow of water through plants	
7.4 Absorption of minerals by roots	
7.5 Transpiration rate	
7.6 Stomata	
7.7 Translocation	
8	
Respiration	90
8.1 The release of energy from food	
8.2 Aerobic respiration	
8.3 Anaerobic respiration	
8.4 How organisms use energy	
9	
Gas exchange and breathing	97
9.1 Gas exchange in small organisms	
9.2 Characteristics of respiratory surfaces	
9.3 Respiratory organs of mammals	
9.4 Gas exchange in the lungs	
9.5 Breathing (ventilation of the lungs)	
9.6 Diseases of the respiratory system	
10	
Homeostasis: the maintenance of a constant internal environment	107
10.1 Homeostasis and feed-back mechanisms	
10.2 The liver	
10.3 Excretion	

- 10.4 Excretion and the kidneys
- 10.5 Osmoregulation
- 10.6 Kidney machines and transplants
- 10.7 Temperature control and the skin

II

Sensitivity and movement in plants 122

- 11.1 Tropisms
- 11.2 Phototropism
- 11.3 Geotropism
- 11.4 Practical uses for plant hormones

12

Support and movement in animals 131

- 12.1 Types of skeleton
- 12.2 The mammal skeleton
- 12.3 Joints
- 12.4 Muscles and movement

13

Co-ordination in animals 139

- 13.1 The need for co-ordination
- 13.2 The components of co-ordinated behaviour
- 13.3 The parts of the nervous system
- 13.4 Nerve impulses
- 13.5 Reflex actions
- 13.6 The brain
- 13.7 The endocrine system

14

Animal senses and behaviour 151

- 14.1 Types of sense organ
- 14.2 Mammal skin senses
- 14.3 Mammal eyes
- 14.4 Stereoscopic vision and distance judgement
- 14.5 Invertebrate response and behaviour

15

The reproductive process 163

- 15.1 The reproductive process
- 15.2 Asexual reproduction
- 15.3 Examples of asexual reproduction
- 15.4 Advantages and disadvantages of asexual reproduction
- 15.5 Sexual reproduction
- 15.6 Types of fertilization
- 15.7 Birth rates and death rates

16	
Reproduction in plants	169
16.1 Flower structure	
16.2 Flower shape and symmetry	
16.3 Pollination	
16.4 Fertilization	
16.5 Seed and fruit formation	
16.6 Dispersal of fruits and seeds	
16.7 Germination	
16.8 Vegetative reproduction	
16.9 Artificial propagation	
17	
Human reproduction	183
17.1 Female reproductive system	
17.2 Menstrual cycle	
17.3 Male reproductive system	
17.4 Copulation and fertilization	
17.5 Pregnancy	
17.6 Birth	
17.7 Feeding and care of babies	
17.8 Diseases associated with reproduction	
17.9 New medical techniques and reproduction	
18	
Population growth and control	198
18.1 Population growth	
18.2 Birth control	
19	
Evolution and natural selection	205
19.1 The theory of evolution	
19.2 How fossils support the theory of evolution	
19.3 The search for a mechanism of evolution	
19.4 The theory of natural selection	
19.5 Evidence in support of natural selection	
19.6 Scientific critics of Darwinism	
20	
Variation, heredity, and genetics	216
20.1 Mendel's experiments	
20.2 Chromosomes and heredity	
20.3 Modern genetics	
20.4 Genetic engineering	
21	
Parasites, disease, and immunity	234
21.1 Parasites	
21.2 Viruses and disease	
21.3 Bacteria and disease	
21.4 Protozoa and disease	

Contents

- 21.5 Fungi and disease
- 21.6 Tapeworms and disease
- 21.7 The spread and prevention of infection
- 21.8 Food preservation
- 21.9 Smoking and ill-health
- 21.10 Alcohol and ill-health
- 21.11 Immunity and immunization

22

Soil 251

- 22.1 Composition and origin of soil
- 22.2 Types of soil
- 22.3 Cultivation of soil
- 22.4 Soil erosion

23

The balance of nature 262

- 23.1 The nitrogen cycle
- 23.2 The carbon cycle
- 23.3 The water cycle
- 23.4 Food chains
- 23.5 Biological pyramids
- 23.6 Food webs

24

Ecology and ecosystems 272

- 24.1 What is ecology?
- 24.2 Colonization, succession, and climax communities
- 24.3 Ecological factors
- 24.4 Practical ecology

25

Pollution and conservation 283

- 25.1 Air pollution
- 25.2 Land and water pollution
- 25.3 Other types of pollution
- 25.4 Control of pollution
- 25.5 Destruction of wildlife
- 25.6 Conservation of wildlife
