# Brief Contents

<b>PART 1</b>	<b>Vertebrate Diversity, Function, and Evolution</b>	<b>2</b>
1	The Diversity, Evolution, and Classification of Vertebrates	3
2	The Origin of Vertebrates	33
3	Vertebrate Organ Systems and Their Evolution	54
4	Homeostasis and Energetics: Water Balance, Temperature Regulation, and Energy Use	111
5	Geography and Ecology from the Cambrian to the Mid-Devonian	147

<b>PART 2</b>	<b>Aquatic Vertebrates: Cartilaginous and Bony Fishes</b>	<b>154</b>
6	Early Vertebrates: Jawless Vertebrates and the Origin of Jawed Vertebrates	155
7	The Rise of Jawed Vertebrates and the Radiation of the Chondrichthyes	184
8	Dominating Life in Water: Teleostomes and the Major Radiation of Fishes	211
9	Geography and Ecology from the Mid-Devonian to the Late Permian	257

<b>PART 3</b>	<b>Terrestrial Ectotherms: Amphibians, Turtles, Crocodilians, and Squamates</b>	<b>262</b>
10	Origin and Radiation of Tetrapods in the Late Paleozoic	263
11	Salamanders, Anurans, and Caecilians	297
12	Turtles	342
13	Mesozoic Diapsids: Dinosaurs, Birds, Crocodilians, and Others	368
14	Geography and Ecology of the Mesozoic	419
15	The Lepidosaurs: Tuatara, Lizards, and Snakes	425
16	Ectothermy: A Low-Cost Approach to Life	468

<b>PART 4</b>	<b>Terrestrial Endotherms: Birds and Mammals</b>	<b>486</b>
17	Characteristics of Birds: Specializations for Flight	487
18	The Ecology and Behavior of Birds	516
19	The Synapsida and the Evolution of Mammals	552
20	Geography and Ecology of the Cenozoic	581
21	Characteristics of Mammals	599
22	Endothermy: A High-Energy Approach to Life	652
23	Body Size, Ecology, and Sociality of Mammals	679
24	Humans as Vertebrates	700

	Glossary	G-1
	Subject Index	SI-1
	Author Index	AI-1

Preface xvii

## **PART 1** Vertebrate Diversity, Function, and Evolution 2

---

### **1** The Diversity, Evolution, and Classification of Vertebrates 3

- The Vertebrate Story 3
- The Different Kinds of Vertebrates 4
- Evolution 7
- Variation and Evolution 11
- Earth History and Vertebrate Evolution 18
- Classification of Vertebrates 20
- Traditional and Cladistic Classifications 21
- The Effect of Human Population Growth on Vertebrate Diversity 27
- Summary 31
- References 32

### **2** The Origin of Vertebrates 33

- Points to Consider in Discussions of Classification and Adaptation 33
- Definition of a Vertebrate 34
- Where Vertebrates Fit in the Animal Kingdom 37
- Nonvertebrate Chordates 40
- Probable Steps in the Origin of the First Vertebrates 44
- The Environment of Early Vertebrate Evolution 51
- Box 2-1 Heterochrony 42
- Summary 52
- References 52

### **3** Vertebrate Organ Systems and Their Evolution 54

- The Unity of Vertebrate Structure: Basic Vertebrate Design 54
- Protection, Support, and Movement 58
- Energy Acquisition and Support of Metabolism 77
- Excretory and Reproductive Systems 92
- Coordination and Integration 97
- Box 3-1 Structure and Design of Muscles 70
- Summary 109
- References 110

## 4 Homeostasis and Energetics: Water Balance, Temperature Regulation, and Energy Use

- The Internal Environment of Vertebrates 111
- Exchange of Water and Ions 112
- Responses to Temperature 127
- Energy Utilization: Patterns among Vertebrates 139
- Summary 145
- References 146

## 5 Geography and Ecology from the Cambrian to the Mid-Devonian

- Earth History, Changing Environments, and Vertebrate Evolution 147
- Continental Geography of the Early Paleozoic 150
- Early Paleozoic Terrestrial Ecosystems 150
- Early Paleozoic Climates 152
- Early Paleozoic Extinctions 152
- References 153

## PART 2 Aquatic Vertebrates: Cartilaginous and Bony Fishes

## 6 Early Vertebrates: Jawless Vertebrates and the Origin of Jawed Vertebrates

- The Earliest Vertebrates 155
- Reconstructing the Biology of the Earliest Vertebrates 156
- The Radiation of Paleozoic Jawless Vertebrates 162
- Extant Jawless Fishes 171
- The Transition from Jawless to Jawed Vertebrates 176
- Box 6-1 Interrelationships of Early Vertebrates 167
- Summary 182
- References 182

## 7 The Rise of Jawed Vertebrates and the Radiation of the Chondrichthyes

- The First Appearance of Jaws and Unique Gnathostome Characters 184
- Earliest Jawed Fishes 187
- Placoderms: The Armored Fishes 187
- Chondrichthyes: The Cartilaginous Fishes 189
- The Earliest Chondrichthyan Radiation 190
- A Second Radiation of Chondrichthyans: Holocephali 208
- Box 7-1 Electoreception by Elasmobranchs 202
- Summary 209
- References 210

## 8 Dominating Life in Water: Teleostomes and the Major Radiation of Fishes 211

- Living in Water 211
- Water and the Sensory World of Fishes 221
- The Appearance of Teleostomes 227
- The Earliest Osteichthyes and the Major Groups of Bony Fishes 229
- Extant Actinopterygii: Ray-Finned Fishes 236
- Actinopterygian Reproduction and Conservation 243
- Deep Sea Fishes 246
- Extant Sarcopterygii: Lobe-Finned Fishes 251
- Box 8-1 What a Fish's Ears Tell About Its Life 245
- Summary 254
- References 255

## 9 Geography and Ecology from the Mid-Devonian to the Late Permian 257

- Late Paleozoic Continental Geography 257
- Late Paleozoic Terrestrial Ecosystems 257
- Late Paleozoic Climates 260
- Late Paleozoic Extinctions 260
- References 261

# PART 3 Terrestrial Ectotherms: Amphibians, Turtles, Crocodilians, and Squamates 262

## 10 Origin and Radiation of Tetrapods in the Late Paleozoic 263

- Tetrapod Origins 263
- Early Tetrapods 267
- The Radiation and Diversity of Nonamniote Paleozoic Tetrapods 275
- Amniotes 282
- Box 10-1 Early Feet 270
- Summary 294
- References 295

## 11 Salamanders, Anurans, and Caecilians 297

- Amphibians 297
- Diversity of Life Histories of Amphibians 311
- Amphibian Metamorphosis 327
- Exchange of Water and Gases 328
- Poison Glands and Other Defense Mechanisms 332
- Mimicry 335

Why Are Amphibians Vanishing?	336
Box 11-1 The Energy Cost of Vocalization by Frogs	320
Summary	339
References	340

## 12 Turtles

342

Everyone Recognizes a Turtle	342
Phylogenetic Relationships of Turtles	345
Turtle Structure and Functions	346
Ecology and Behavior of Turtles	354
Conservation of Turtles	360
Box 12-1 Sick Turtles	362
Summary	366
References	366

## 13 Mesozoic Diapsids: Dinosaurs, Birds, Crocodilians, and Others

368

The Mesozoic Fauna	368
Phylogenetic Relationships among Diapsids	369
The Archosauromorpha	369
The Saurischian Dinosaurs and the Origin of Birds	379
The Ornithischian Dinosaurs	391
The Ecology and Behavior of Dinosaurs	399
Were Dinosaurs Endotherms?	406
The Lepidosauromorpha: Ichthyosaurs, Lizards, and Others	407
Other Terrestrial Vertebrates of the Late Mesozoic	412
Late Cretaceous Extinctions	412
Box 13-1 Dinosaur Eggs and Nests	404
Summary	415
References	416

## 14 Geography and Ecology of the Mesozoic

419

Mesozoic Continental Geography	419
Mesozoic Terrestrial Ecosystems	419
Mesozoic Climates	423
Mesozoic Extinctions	423
References	424

## 15 The Lepidosaurs: Tuatara, Lizards, and Snakes

425

The Lepidosaurs	425
The Radiation of Squamates	429
Ecology and Behavior of Squamates	440
Thermoregulation	458

- Box 15-1 Caudal Autotomy: Your Tail or Your Life 448  
 Summary 465  
 References 466

## 16 Ectothermy: A Low-Cost Approach to Life 468

- Vertebrates and Their Environments 468  
 Heat: Ectotherms in Deserts 469  
 Cold: Ectotherms in Sub-Zero Conditions 479  
 The Role of Ectothermal Tetrapods in Terrestrial Ecosystems 482  
 Box 16-1 Doubly Labeled Water 472  
 Summary 485  
 References 485

## **PART 4** Terrestrial Endotherms: Birds and Mammals 486

## 17 Characteristics of Birds: Specializations for Flight 487

- Birds as Flying Machines 487  
 Feathers and Flight 488  
 Aerodynamics of the Avian Wing Compared with Fixed Airfoils 492  
 Body Form and Flight 499  
 Feeding, Digestion, and Excretion 503  
 The Hindlimbs and Locomotion 506  
 The Sensory Systems 510  
 Box 17-1 High-Flying Birds 503  
 Summary 514  
 References 515

## 18 The Ecology and Behavior of Birds 516

- The Evolution of Birds 516  
 Birds as Model Organisms 520  
 Social Behavior and Reproduction 529  
 Imprinting, Learning, and Captive Husbandry 543  
 Migration and Navigation 544  
 Box 18-1 Giant Predatory Birds 524  
 Summary 549  
 References 550

## 19 The Synapsida and the Evolution of Mammals 552

- The Origins of Synapsids 552  
 Primitive Nonmammalian Synapsids: the Pelycosaurs 553  
 More Derived Nonmammalian Synapsids: the Therapsids 555

Evolutionary Trends in Synapsids	563
The First Mammals	571
Box 19-1 The Evolution of the Mammalian Middle Ear	567
Summary	578
References	579

## 20 Geography and Ecology of the Cenozoic 581

Continental Geography During the Cenozoic	581
The Pleistocene Ice Ages	583
Biogeography of Cenozoic Mammals	587
Convergent Evolution of Mammalian Ecomorphological Types	588
Early Cenozoic Distribution of Mammalian Types	591
Cenozoic Extinctions	596
References	598

## 21 Characteristics of Mammals 599

Features Shared by All Mammals	599
The Major Lineages of Mammals	606
Mammalian Reproduction	619
Adaptations for Feeding	630
Adaptations for Locomotion	635
Mammalian Brain and Sensory Systems	645
Box 21-1 Herbivores, Microbes, and the Ecology of Digestion	638
Summary	649
References	649

## 22 Endothermy: A High-Energy Approach to Life 652

Costs and Benefits	652
Energy Budgets of Vertebrates	653
Endotherms in the Cold: The Arctic	656
Migration to Avoid Stressful Conditions	659
Torpor as a Response to Low Temperatures and Limited Food	661
Endotherms in the Heat: Deserts	666
Box 22-1 How Hot Is It?	674
Summary	677
References	678

## 23 Body Size, Ecology, and Sociality of Mammals 679

Social Behavior	679
Population Structure and the Distribution of Resources	680
Advantages of Sociality	685

Body Size, Diet, and the Structure of Social Systems 686  
 Social Systems Among Primates 692  
 Box 23-1 Altruism—or Taunting? 691  
 Summary 698  
 References 698

700

## 24 Humans as Vertebrates

Primate Origins and Diversification 700  
 The Origin and Evolution of the Hominoidea 709  
 Origin and Evolution of Humans 713  
 The Evolution of Human Characteristics: Bipedality, Larger Brains,  
 and Language 722  
 Origins of Human Technology and Culture 726  
 Humans and the Pleistocene Extinctions of Mammals 728  
 Box 24-1 Correlation of Bipedality with Increase in Brain Size  
 in Human Evolution 726  
 Summary 731  
 References 731
