

THIRD EDITION

D. J. TAYLOR
N. P. O. GREEN
G. W. STOUT

EDITOR:
R. SOPER

BIOLOGICAL SCIENCE 1

Organisms, Energy and Environment

CAMBRIDGE

Contents

Preface to first edition	v	Chapter Six Histology	167
Preface to third edition	vi	6.1 Simple plant tissues – tissues consisting of one type of cell	167
Acknowledgements	vii	6.2 Plant tissues consisting of more than one type of cell	174
Chapter One Introduction to the subject	1	6.3 Animal epithelial tissue	183
Chapter Two Variety of life	3	6.4 Animal connective tissue	187
2.1 Classification	3	6.5 Muscle tissue	191
2.2 Five kingdoms	6	6.6 Nervous tissue	191
2.3 Prokaryotes	8	Chapter Seven Autotrophic nutrition	196
2.4 Viruses	19	7.1 Why do living organisms need energy?	196
2.5 Kingdom Fungi	25	7.2 Grouping organisms according to their energy and carbon sources	196
2.6 Kingdom Protoctista	30	7.3 Importance of photosynthesis	197
2.7 Kingdom Plantae	36	7.4 The structure of the leaf	197
2.8 Kingdom Animalia (animals)	52	7.5 Photosynthetic pigments	202
Chapter Three Chemicals of life	77	7.6 Biochemistry of photosynthesis	205
3.1 Introduction to biochemistry	77	7.7 Metabolism of glycerate phosphate and triose phosphate	210
3.2 Carbohydrates	82	7.8 Factors affecting photosynthesis	212
3.3 Lipids	89	7.9 C ₄ photosynthesis	213
3.4 Amino acids	93	7.10 Mineral nutrition of plants and animals	216
3.5 Proteins	97	7.11 Experimental work	220
3.6 DNA and RNA, the nucleic acids	105	7.12 Compensation points	225
3.7 Identification of biochemicals	111	Chapter Eight Heterotrophic nutrition	227
Chapter Four Enzymes	116	8.1 Forms of heterotrophic nutrition	227
4.1 Properties of enzymes	116	8.2 Feeding mechanisms in a range of animals	230
4.2 The rate of enzyme reactions	118	8.3 The alimentary canal in humans	235
4.3 Factors affecting the rate of enzyme reactions	118	8.4 Nervous and hormonal control of digestive secretions	249
4.4 Enzyme inhibition	123	8.5 The fate of absorbed food materials – a summary	250
4.5 Enzyme cofactors	126	8.6 Herbivores	250
Chapter Five	128	8.7 Nutrition in humans	251
5.1 The cell concept	128	8.8 Recommended intakes of nutrients and reference values	256
5.2 Cells seen with the light microscope	129	Chapter Nine Energy utilisation	264
5.3 Prokaryotes and eukaryotes	130	9.1 What is respiration	264
5.4 Compartments and division of labour	130	9.2 ATP	265
5.5 Units of measurement	130	9.3 Cell respiration	266
5.6 Electron microscopy	131	9.4 Gaseous exchange	277
5.7 Cell fractionation	134	9.5 Gaseous exchange in a mammal	283
5.8 Ultrastructure of plant and animal cells	134	9.6 Gaseous exchange in flowering plants	294
5.9 Cell membranes	140		
5.10 Structures found in cells	147		
5.11 Use of hand lens and microscope	159		
5.12 Microscope techniques	163		
5.13 Recording by biological drawing	165		

9.7	Respiratory disease and ill health	294	Chapter Twelve Microbiology and biotechnology	375
Chapter Ten	Organisms and the environment	298	12.1	Requirements for growth 375
(Dr Ros Taylor)			12.2	Culture media 378
10.1	Approaches to ecology	298	12.3	Aseptic technique 379
10.2	Ecosystems	299	12.4	Methods of inoculation 380
10.3	Ecosystems and energy flow	301	12.5	Bacterial growth 384
10.4	Biogeochemical cycles – the cycling of matter	310	12.6	Measuring population growth of bacteria and fungi 386
10.5	Factors influencing environments and habitats	312	12.7	Staining bacteria – the Gram stain 388
10.6	Community ecology	317	12.8	Growing viruses 388
10.7	Population ecology	321	12.9	Experimental work 389
10.8	Human impacts on ecosystems	326	12.10	Large-scale production 392
10.9	Conservation	338	12.11	Medical products 395
Chapter Eleven	Quantitative ecology	349	12.12	Food and drink 400
11.1	Methods of measuring environmental factors	349	12.13	Agriculture 405
11.2	Biotic analysis	356	12.14	Fuel – new energy sources 406
11.3	Ecological research projects and investigations	366	12.15	Microbiological mining 408
11.4	A synecological investigation	366	12.16	Enzyme technology 409
11.5	An autecological investigation	373	12.17	Biosensors 414
			Answers and discussion	417
			Index	426
