

Ecology

PRINCIPLES

AND APPLICATIONS

SECOND EDITION

J L Chapman and M J Reiss

CONTENTS

Preface 1

Chapter 1 Introduction

- 1.1 What is ecology? 2
- 1.2 The nature of ecology 3
- 1.3 The study of ecology 3

Chapter 2 The individual

- 2.1 Why look at individuals in ecology? 5
- 2.2 Autotrophs and heterotrophs 5
 - 2.2.1 Terms associated with heterotrophic nutrition 5
 - 2.2.2 Ingestion by heterotrophs 6
- 2.3 Metabolic rate 7
- 2.4 Factors affecting metabolic rate 19
 - 2.4.1 Size 9
 - 2.4.2 Life style 9
- 2.5 Size determines more than metabolic rate 10
- 2.6 Energy budgets 11
 - 2.6.1 Assimilation efficiency 11
 - 2.6.2 Production and respiration 11
 - 2.6.3 Allocation to reproduction 12
 - 2.6.4 Drawing up a complete energy budget 12
- 2.7 Distinguishing between growth and reproduction 13

Chapter 3 Autecology

- 3.1 The meaning of autecology 16
- 3.2 The autecology of bracken 16
 - 3.2.1 The importance of bracken 16
 - 3.2.2 The life form of bracken 17
 - 3.2.3 Anti-predator mechanisms 18
- 3.3 The autecology of the European starling 19
 - 3.3.1 Appearance and distribution 19
 - 3.3.2 Feeding habits 20
 - 3.3.3 Roosting behaviour of starlings 21
 - 3.3.4 Reproduction 22
 - 3.3.5 Starlings and humans 22

Chapter 4 Population dynamics

- 4.1 Populations and population change 23
- 4.2 Dispersal of organisms 24
- 4.3 Dormancy 24
- 4.4 The study of populations 25
 - 4.4.1 The basic equation 25
 - 4.4.2 ...

- 4.4.5 Long-term population studies 29
- 4.5 Presentation of demographic data 29
 - 4.5.1 Life tables 29
 - 4.5.2 Population pyramids 30
 - 4.5.3 Survivorship curves 30
- 4.6 Evolutionary strategies 32
 - 4.6.1 Strategies as shown by survivorship curves 32
 - 4.6.2 *r*- and *K*-strategies 32
- 4.7 Modular organisms 34

Chapter 5 Population regulation

- 5.1 Population growth 37
 - 5.1.1 Population growth without regulation – exponential growth 37
 - 5.1.2 Simple population regulation – the logistic growth curve 38
- 5.2 Factors which regulate population size 39
 - 5.2.1 Types of regulation 39
 - 5.2.2 Space 41
 - 5.2.3 Food and water 42
 - 5.2.4 Territories 43
 - 5.2.5 Herbivores and predators 44
 - 5.2.6 Weather and climate 45
 - 5.2.7 Parasites and diseases 45
 - 5.2.8 Natural disasters 46
 - 5.2.9 Self-regulation and stress 47
- 5.3 Patterns in population dynamics 48

Chapter 6 Ecological genetics

- 6.1 The importance of genetics to ecology 51
 - 6.1.1 The source of variation 51
 - 6.1.2 Genetic and environmental variation 51
 - 6.1.3 The role of variation in natural selection 51
- 6.2 Reproductive systems 52
 - 6.2.1 Formation of genetic variation 52
 - 6.2.2 Obligate cross-fertilisation 53
 - 6.2.3 Facultative cross-fertilisation 53
 - 6.2.4 Self-fertilisation 53
 - 6.2.5 Seed apomixis 54
 - 6.2.6 Vegetative reproduction 55
- 6.3 Genetic consequences of different reproductive systems 55
 - 6.3.1 The source of inherited variation 55
