Ecology

principles and applications

J.L. Chapman and M.J. Reiss

Contents

Preface 1

Chapter 1 *Introduction*

- 1.1 What is ecology? 3
- 1.2 The nature of ecology 4
- 1.3 The study of ecology 4

Summary 6

Chapter 2 *The individual*

- 2.1 Why look at individuals in ecology? 7
- 2.2 Autotrophs and heterotrophs 7
 - 2.2.1 Terms associated with heterotrophic nutrition 7
 - 2.2.2 Ingestion by heterotrophs 8
- 2.3 Metabolic rate 9
- 2.4 Factors affecting metabolic rate 11
 - 2.4.1 Size 11
 - 2.4.2 Lifestyle 11
- 2.5 Size determines more than metabolic rate 12
- 2.6 Energy budgets 13
 - 2.6.1 Assimilation efficiency 13
 - 2.6.2 Production and respiration 13
 - 2.6.3 Allocation to reproduction 14
 - 2.6.4 Drawing up a complete energy budget 14
- 2.7 Distinguishing between growth and reproduction 15

Summary 17

Further reading 17

Chapter 3 *Autecology*

- 3.1 The meaning of autecology 18
- 3.2 The autecology of bracken 18
 - 3.2.1 The importance of bracken 18
 - 3.2.2 The life form of bracken 19
 - 3.2.3 Anti-predator mechanisms 20
- 3.3 The autecology of the European starling 21
 - 3.3.1 Appearance and distribution 21
 - 3.3.2 Feeding habits 22
 - 3.3.3 Roosting behaviour of starlings 23
 - 3.3.4 Reproduction 24
 - 3.3.5 Starlings and humans 24

Summary 25

Further reading 25

Chapter 4 *Population dynamics*

- 4.1 Populations and population change 26
- 4.2 Dispersal of organisms 27
- 4.3 Dormancy 27
- 4.4 The study of populations 27
 - 4.4.1 The basic equation 27
 - 4.4.2 Age structure in populations 28
 - 4.4.3 The fate of a cohort 31
 - 4.4.4 Age at death 32
 - 4.4.5 Long-term population studies 32
- 4.5 Presentations of demographic data 32
 - 4.5.1 Life tables 32
 - 4.5.2 Population pyramids 32
 - 4.5.3 Survivorship curves 33
- 4.6 Evolutionary strategies 35
 - 4.6.1 Strategies as shown by survivorship curves 35
 - 4.6.2 r - and K - strategies 35
- 4.7 Modular organisms 37

Summary 39

Further reading 39

Chapter 5 *Population regulation*

- 5.1 Population growth 40
 - 5.1.1 Population growth without regulation – exponential growth 40
 - 5.1.2 Simple population regulation – the logistic growth curve 41
- 5.2 Factors which regulate population size 42
 - 5.2.1 Types of regulation 42
 - 5.2.2 Space 44
 - 5.2.3 Food and water 45
 - 5.2.4 Territories 46
 - 5.2.5 Herbivores and predators 47
 - 5.2.6 Weather and climate 48
 - 5.2.7 Parasites and diseases 48
 - 5.2.8 Natural disasters 49
 - 5.2.9 Self-regulation and stress 50
- 5.3 Patterns in population dynamics 51

Further reading 52

Summary 53

Chapter 6 Ecological genetics

- 6.1 The importance of genetics to ecology 54
 - 6.1.1 The source of variation 54
 - 6.1.2 Genetic and environmental variation 54
 - 6.1.3 The role of variation in natural selection 54
- 6.2 Reproductive systems 55
 - 6.2.1 Formation of genetic variation 55
 - 6.2.2 Obligate cross-fertilisation 56
 - 6.2.3 Facultative cross-fertilisation 56
 - 6.2.4 Self-fertilisation 56
 - 6.2.5 Seed apomixis 57
 - 6.2.6 Vegetative reproduction 58
- 6.3 Genetic consequences of different reproductive systems 58
 - 6.3.1 The source of inherited chromosomes 58
 - 6.3.2 The consequences of outcrossing 58
 - 6.3.3 The consequences of self-fertilisation 59
 - 6.3.4 The consequences of asexual reproduction 60
- 6.4 Patterns of genetic variation 61
 - 6.4.1 External influences on genetic variation 61
 - 6.4.2 Founder effects and bottlenecks 61
 - 6.4.3 Isolation of populations 62
 - 6.4.4 Ecotypes and ecoclines 62
- 6.5 Genetic variation within an organism 66
- Summary 66
- Further reading 66

Chapter 7 Behavioural ecology

- 7.1 What is behavioural ecology? 67
- 7.2 Optimisation theory 67
- 7.3 Optimal foraging 67
 - 7.3.1 Optimal foraging in crows 67
 - 7.3.2 Foraging in African elephants 68
 - 7.3.3 Optimal foraging in plants 69
- 7.4 Growth versus reproduction 70
- 7.5 Reproducing only once versus reproducing several times 71
- 7.6 Parental care 72
 - 7.6.1 Offspring size 72
 - 7.6.2 Which sex looks after the offspring? 72
- 7.7 Breeding systems in plants 73
- 7.8 Alternative strategies 74
- 7.9 Games theory 75
- 7.10 Constraints on adaptation 77
 - 7.10.1 Time lags 78
 - 7.10.2 Historical constraints 78
 - 7.10.3 Lack of genetic variation 79
- Summary 79
- Further reading 79

Chapter 8 Sociobiology

- 8.1 Living in groups 80
- 8.2 The advantages of group living 80
 - 8.2.1 Less risk of predation 80
 - 8.2.2 More chance of obtaining food 81
 - 8.2.3 Other advantages of group living 81
- 8.3 The disadvantages of group living 82
- 8.4 Optimal group size 83
- 8.5 Evolution of helping behaviour 83
 - 8.5.1 Kin selection 83
 - 8.5.2 Reciprocal altruism 84
 - 8.5.3 Group selection 86
- 8.6 The unit of selection and social behaviour 86
 - 8.6.1 Termites 86
 - 8.6.2 Army ants 88
 - 8.6.3 Lions 90
 - 8.6.4 Naked mole rats 91
- 8.7 Human sociobiology 92
 - 8.7.1 Parental investment in the later mediaeval Portuguese nobility 93
 - 8.7.2 Helping behaviour in humans 94
- Summary 94
- Further reading 94

Chapter 9 The environment

- 9.1 What is the environment? 95
- 9.2 The physical environment 96
 - 9.2.1 The composition of the physical environment 96
 - 9.2.2 Geology and soil 96
 - 9.2.3 Topography 99
 - 9.2.4 Latitudinal light and temperature variation 100
 - 9.2.5 Climate and weather 100
 - 9.2.6 Catastrophes 104
- 9.3 The biotic environment 104
 - 9.3.1 Types of interaction 104
 - 9.3.2 Intraspecific relationships (within species) 104
 - 9.3.3 Interspecific relationships (between species) 105
- 9.4 Biotic and abiotic interactions 106
 - 9.4.1 The complexity of the environment 106
 - 9.4.2 Pathogens and climate 106
 - 9.4.3 Abiotic effects on competition 107
- Summary 108
- Further reading 108

Chapter 10 Habitats and niches

- 10.1 Habitats 109
- 10.2 Niches 109
 - 10.2.1 Determining niches 109
 - 10.2.2 Each species has its own unique niche 111
- 10.3 Gause's competitive exclusion principle 113
- 10.4 Species coexistence 115

- 10.4.1 Size ratios in closely related species 115
- 10.4.2 Niche overlap and species coexistence 116
- 10.5 Fundamental and realised niches 116
- 10.6 Resource partitioning 117
- 10.7 Character displacement 119
- 10.8 The importance of interspecific competition in natural communities 119
- 10.9 Do plants need niches? 121
- 10.10 Community structure of fish on coral reefs 122

Summary 122

Further reading 123

Chapter 11 *Trophic levels*

- 11.1 Why study trophic levels? 124
- 11.2 Autotrophs 124
 - 11.2.1 Photoautotrophs 124
 - 11.2.2 Chemoautotrophs 125
- 11.3 Decomposers 126
 - 11.3.1 Decomposition on the forest floor 127
 - 11.3.2 Decomposition of dead plant matter 128
- 11.4 Herbivores and carnivores 129
- 11.5 Omnivores 130
- 11.6 Food chains 130
- 11.7 Food webs 132
- 11.8 Pyramids of numbers 133
- 11.9 Pyramids of biomass 134

Summary 135

Further reading 135

Chapter 12 *Energy transfer*

- 12.1 Energy and disorder 136
- 12.2 Primary production in terrestrial communities 136
- 12.3 Primary production in aquatic communities 140
- 12.4 The capture of light by plants 140
- 12.5 Efficiencies in ecology 141
- 12.6 Energy flow in natural communities 141
 - 12.6.1 Odum's (1957) study at Silver Springs, Florida 142
 - 12.6.2 Teal's (1962) study at a salt marsh in Georgia 142
 - 12.6.3 Varley's (1970) study of Wytham Wood, Oxford 144
- 12.7 The efficiency of energy transfer in ecosystems 146
- 12.8 Pyramids of energy 148

Summary 150

Further reading 150

Chapter 13 *Nutrient cycling and pollution*

- 13.1 The pattern of nutrient transfer and its connection with pollution 151
- 13.2 The carbon cycle 151
- 13.3 The greenhouse effect 152
- 13.4 The nitrogen cycle 155
- 13.5 The phosphorus cycle 157
- 13.6 Interactions between the nutrient cycles 158
- 13.7 The importance of nutrient availability 158
 - 13.7.1 The response of organisms to nutrient availability 159
 - 13.7.2 China clay waste tips 160
 - 13.7.3 Nutrient cycling in tropical forests 160
- 13.8 Pollution 161
 - 13.8.1 Different forms of pollution 161
 - 13.8.2 Eutrophication 161
 - 13.8.3 Heavy metal toxicity 162
 - 13.8.4 Alkaline wastes 163
 - 13.8.5 Acid rain 163
 - 13.8.6 Pesticides 164
 - 13.8.7 CFCs and the ozone layer 166

Summary 166

Further reading 166

Chapter 14 *Communities*

- 14.1 The community concept 167
 - 14.1.1 Definitions 167
 - 14.1.2 Recognition of communities 167
- 14.2 The structure of communities 167
 - 14.2.1 The investigation of communities 167
 - 14.2.2 Oak woodland communities 168
 - 14.2.3 Marine rock pools 171
 - 14.2.4 Mammalian gut communities 173
- 14.3 Global distribution of terrestrial communities 175
- 14.4 Patterns of diversity 179
 - 14.4.1 Global diversity 179
 - 14.4.2 Species richness in a community 180
 - 14.4.3 The global cline 181

Summary 184

Further reading 184

Chapter 15 *Ecosystems*

- 15.1 The first use of ecosystem 185
- 15.2 Soils 185
 - 15.2.1 The structure of soils 185
 - 15.2.2 The great soil groups 188
 - 15.2.3 The effect of vegetation on soil – two case studies 192
- 15.3 Wetland and aquatic ecosystems 194
 - 15.3.1 Water – the important factor 194
 - 15.3.2 Types of wetlands 195
 - 15.3.3 Marine wetland ecosystems 195

- 15.3.4 Floodland ecosystems 196
- 15.3.5 Swamp and marsh ecosystems 197
- 15.3.6 Bog ecosystems 198
- 15.3.7 Aquatic ecosystems 199
- 15.4 Inter-relationships of ecosystems 200

Summary 202

Further reading 202

Chapter 16 Succession

- 16.1 Vegetation changes 203
- 16.2 The causes of change 204
- 16.3 Examples of primary seres 205
 - 16.3.1 Xeroseres 205
 - 16.3.2 Hydroseres 207
- 16.4 Patterns of succession 208
 - 16.4.1 Variation in seres 208
 - 16.4.2 The end of the succession 209
 - 16.4.3 Diverted seres 210
- 16.5 Human influence on succession 211

Summary 212

Further reading 212

Chapter 17 Biomes

- 17.1 How many biomes are there? 214
- 17.2 The world's terrestrial biomes 214
 - 17.2.1 Tropical rainforest 214
 - 17.2.2 Elfinwood 216
 - 17.2.3 Tropical seasonal forest 216
 - 17.2.4 Tropical broad-leaved woodland 216
 - 17.2.5 Thornwood 216
 - 17.2.6 Temperate rainforest 216
 - 17.2.7 Temperate deciduous forest 216
 - 17.2.8 Temperate evergreen forest 217
 - 17.2.9 Temperate woodland 217
 - 17.2.10 Temperate shrubland 217
 - 17.2.11 Boreal forest 218
 - 17.2.12 Savannah 218
 - 17.2.13 Temperate grassland 219
 - 17.2.14 Alpine shrubland 220
 - 17.2.15 Alpine grassland 220
 - 17.2.16 Tundra 220
 - 17.2.17 Warm semi-desert scrub 220
 - 17.2.18 Cool semi-desert 221
 - 17.2.19 Arctic-alpine semi-desert 221
 - 17.2.20 Desert 221
 - 17.2.21 Arctic-alpine desert 222
- 17.3 Wetland and freshwater biomes 222
 - 17.3.1 Cool temperate bog 222
 - 17.3.2 Tropical freshwater swamp forest 222
 - 17.3.3 Temperate freshwater swamp forest 222
 - 17.3.4 Lakes and ponds 222
 - 17.3.5 Streams and rivers 222
- 17.4 Coastal and marine biomes 223
 - 17.4.1 Marine rocky shore 223
 - 17.4.2 Marine sandy beach 223

- 17.4.3 Marine mud flat 224
- 17.4.4 Temperate salt marsh 224
- 17.4.5 Mangrove swamp 224
- 17.4.6 Coral reef 224
- 17.4.7 Marine surface pelagic 225
- 17.4.8 Marine deep pelagic 226
- 17.4.9 Continental shelf benthos 226
- 17.4.10 Deep ocean benthos 227

Summary 227

Further reading 227

Chapter 18 Biogeography

- 18.1 Species distribution – where and why? 228
- 18.2 The historic effects of plate tectonics 229
 - 18.2.1 Past continental movements 229
 - 18.2.2 Present patterns of biogeography 232
- 18.3 Island biogeography 234
 - 18.3.1 The fascination of islands 234
 - 18.3.2 Colonisation of isolated islands 234
 - 18.3.3 The equilibrium theory 237
 - 18.3.4 Evolution on islands 238
 - 18.3.5 Mountain islands 240

Summary 242

Further reading 242

Chapter 19 Co-evolution

- 19.1 The different grades of co-evolution 243
- 19.2 Pairwise co-evolution 244
 - 19.2.1 General aspects of one-on-one relationships 244
 - 19.2.2 The ant-acacia example 246
- 19.3 Diffuse co-evolution 246
 - 19.3.1 Co-evolution between groups of species 246
 - 19.3.2 The mammalian predator-prey example 247
 - 19.3.3 The Red Queen hypothesis 249
- 19.4 Insect pollination 249
 - 19.4.1 Angiosperm-pollinator relationships 249
 - 19.4.2 The early evolution of insect pollination 252
 - 19.4.3 Orchids and Hymenoptera 253
- 19.5 Introduced species 253

Summary 256

Further reading 256

Chapter 20 Conservation

- 20.1 The reasons for conservation 257
 - 20.1.1 The pressure on wildlife 257
 - 20.1.2 Why bother to conserve? 257
 - 20.1.3 The role of ecology 259
- 20.2 Conservation of species 259
 - 20.2.1 Why do species become extinct? 259
 - 20.2.2 Genetic diversity in rare species 261
 - 20.2.3 Re-introductions 263

20.3	Conservation of ecosystems	264
20.3.1	The importance of habitat conservation	264
20.3.2	Design of conservation areas	265
20.3.3	Maintenance of conservation areas	267
20.4	Conservation of the biosphere	269
20.5	Viable conservation	270
20.5.1	Making conservation pay	270
20.5.2	What can we do?	271

Summary	273
Further reading	273
Glossary	274
Bibliography	281
